## Updating License Manager after maintenance has expired

Stephen Pienaar - 2017-10-12 - 0 Comments - in Updating PROKON

We continuously work on improving **License Manager** to ensure smooth operation, e.g. in situations with poor or no Internet connectivity. The latest version of **License Manager** will automatically be installed when you use **Live Update**. However, if your software maintenance has expired, you cannot install **PROKON** program updates. In that case, you are welcome to install the latest version of **License Manager** manually.

Update steps:

- Close all running **PROKON** programs.
- Download the update package for latest version of **License Manager** from <https://download.prokon.com/LM.zip>.
- Unzip the contents of the package to your `\Prokon\Bin` folder, overwriting the existing `LicenseManager.exe` file.
